	Vendor code: 60302 <a href="#"><b>BUY CARTALAX</b></a>
<b>Description</b>	
<p>Diseases of the spine system caused by disorders of the connective tissues and cartilage structures which are common among elderly patients as well as young adults. Care at all times for patients with this condition is very high, as it often results in a major restriction of efficiency, as well as disability. To correct and prevent violations of the connective tissue which occur during various diseases, we have developed a bioregulator from cartilage - Cartalax.</p> <p>Cartalax is a peptide complex that contains amino acids that contribute to the normalization of cartilage and spine system.</p> <p>A clinical study has demonstrated the efficiency of Cartalax in comprehensive prevention and treatment of patients with spinal osteochondrosis, osteoarthritis, osteoporosis, after injuries and fractures, as well as in the prevention of sclerotic and degenerative processes in the spine and joints in elderly patients.</p> <p>The supplement can be easily combined with medicine or other groups of supplements which are used for treatment of this group of diseases.</p> <p>While taking Cartalax, patients have demonstrated a significant smoothing of pathological symptoms, including pain, which are usually characterized by a significant resistance to conventional therapy.</p> <p>Cartalax is well tolerated, with no identified side effects, complications, contraindications</p>	

and drug dependence.

**Purpose:**

- Arthrosis and arthritis,
- Osteochondrosis,
- Osteoporosis,
- Degenerative-dystrophic diseases of joints and spine,
- Rheumatism,
- Consequences after trauma,
- Arthropathy,
- Gout,
- Systemic prevention of bone and joint injuries in elite sports,
- Systemic connective tissue disease,
- Preoperative and postoperative periods in operations of joints,
- Improves health after extreme physical exertion,
- Prevention of degenerative processes in the spine and joints in elderly people.

**Ingredients**

Peptide complex AC-4-(alanine, glutamic acid, aspartic acid). Other ingredients: microcrystalline cellulose (E460), beetroot sugar, lactose, starch, Tween-80. As an additional source of peptides.

**Directions**

Adults: from 1 to 2 capsules, once or twice a day during food intake. Duration: 10-30 days. It is advised to repeat the procedure after 4-6 months.

**Form release:**

60 capsules of 0.2 g

**Production**

Scientific and Production Center of Revitalization and Health  
St. Petersburg University of Bioregulation and Gerontology
