BUY ARDILIV

Description
The result of this product is a combination of the latest achievements of European medicine and Eastern medicine. The product has several purposes and benefits. It stimulates regeneration of liver cells, performs detoxification and has antioxidant effects, as well able to block the spread of hepatitis B virus in the body by lowering cholesterol levels. This way, significantly, process of liver cirrhosis slows down and its function normalizes; therefore helps to achieve stable and positive results in patients with various forms of hepatitis.

Directions
Adults and children over 14 years old: 1-2 capsules, 2 times a day with meals. Course duration 1 month. Course can be repeated 3-4 times a year.

Ingredients
Extracts of: red leaf grapes, strawberries, artichokes, dihydroquercetin resveratrol.
Other ingredients: microcrystalline cellulose or lactose, calcium stearate or talcum powder. Recommended as a source of resveratrol, taxifolin and tannins.

2 - 4 capsules contain:
- Resveratrol - 2.4-4.8 mg, corresponding to 8-16% *
- Dihydroquercetin - 3,6-7,2 mg, or 14,4-28,8% *
- Tannins - 24-48 mg, corresponding to 8-16% *

* Of the recommended daily requirement.

Recommended application:
chronic toxicity,
hepatitis,
toxic, alcohol and drug hepatitis,
detoxification of liver,
hepatic steatosis,
cirrhosis,
prevention of liver adenocarcinoma.

Main components

This phytoalexin, one of the major components of the extract of grape skins. Like all polyphenols, resveratrol - a powerful antioxidant activity which is superior to vitamin E. Resveratrol exhibits estrogenic activity by binding to the same receptors as estradiol, one of the main human estrogen. In contrast to estradiol and dietilstilbestrola that accelerate the development of a number of hormone-dependent tumors and the excess of which is associated with an increased risk of developing breast cancer, resveratrol exhibits multifaceted antitumor effect. Experiments show that it inhibits ribonucleotide reductase and inhibit DNA synthesis mammals by blocking directly tumor cell multiplication. Another mechanism of antitumor action of resveratrol is its competition with estradiol for binding sites on the receptor, which reduces the stimulating effect of estradiol on cell hormone dependent tumors. Like all the phytoestrogens, resveratrol may reduce the risk of osteoporosis, which is often caused by a drop in estrogen levels in women during menopause. The same beneficial effect of resveratrol on the skin by stimulating the synthesis of collagen and preventing it from cross-linking. This effect is explained by the combined antioxidant and estrogenic effects resveratrol. Experimental study received and cardioprotective properties of red wine. It was found that the grape juice and red wine making low density lipoproteins extremely resistant to oxidation under conditions in vitro. Since the oxidation of low density lipoproteins in the blood is a major cause of atherosclerosis, grape polyphenols to prevent such oxidation, should substantially reduce the risk of cardiovascular diseases. Resveratrol - a regulator of fat metabolism in the body. Atherosclerosis of blood vessels associated with the intake of fat food, their absorption in the gastrointestinal tract, the concentration of lipid (cholesterol and triglyceride) in blood plasma deposition and penetration of products of oxidation of lipoprotein (fat + protein) in the blood vessel wall, followed by adhesion of platelets and plaque formation. This leads to a narrowing of the lumen of blood vessels of the heart muscle, brain and other organs.

Form release:

30 capsules of 0,3 g
