# PEPTIDE COMPLEX Nr 14 - for veins

- Peptides
- Peptide Complexes in Solution
- Peptide Complex 14

Vendor code: 60414

# **BUY PEPTIDE COMPLEX 14**

# Description

Peptide complex for veins. Has natural peptides from vessels.

#### Purpose:

- Prevention of pre-mature ageing,
- Prevention of thromboses,
- Varicose veins,
- Hemorrhoid,
- Thrombophlebitis,
- Trophic ulcers.

#### **Ingredients**

Distilled water, peptide complex A-3, glycerin, bio-antioxidant complex "Neovitin ®", phenoxyethanol with ethylhexylglycerin, propylene glycol, xanthan gum, PEG-40 hydrogenated castor oil, essential oil of lavender, metilhlorizotiazolinon, methylisothiazolinone.

### Application method

From 6-8 drops apply on the inner elbow part of the arm, perfom massage movements until the substance is completly absorbed. Duration - 3 months. Up to 6 peptide complexes can be used at the same time.

## Main components

Essential oil of lavender

Essential oil of lavender has very strong anticonvulsant, sedative and diuretic effects. With the help of lymph drainage effect lavender essential oil improves blood circulation, stimulates the cardiovascular system and cerebral circulation. Essential oil of lavender is a

powerful antiseptic, antibacterial and regenerating tool; therefore is used for the rapid healing of wounds, the destruction of pathogens, healing of scars and skin seals. Clinical data has shown strong sedative and tonic properties of lavender oil. The aroma of lavender normalizes the function of the nervous system and is widely used for insomnia, nervousness, and disorders of the nervous origin, general weakness, fatigue and loss of strength.

#### Neovitin

Bio-antioxidant complex Neovitin comes from original technology of the cultivated strains of biotechnological method from the ginseng biomass. The new technology allows achieving the most complete extraction of the complex without losing its antioxidant activity. Bioantioxidant complex Neovitin is anti-inflammatory and has immune stimulatory effects. Synergistic effect of the active components of the complex leads to the production of antioxidant enzymes in the body and interferon, which inhibit the reaction of peroxide oxidation (destruction) of lipid cell membranes of blood vessels whilst strengthening them, and thereby increasing the resistance of the body. Neovitin controls the formation and leads to the physiological formation of the main instigators of premature aging - free radicals, which are developed of throughout human organism life. It is also the main agent to neutralize free radicals. The complex is stable during its storage period and has a high, penetrating ability through the epidermis, dermis and mucous membrane. It has been proved: Neovitin has anti-inflammatory and regenerative effects, which result in its widest application in anti-aging skin and health care products and oral care. The unique properties of Neovitin have been confirmed by 11 patents and awarded gold medals RANS with the name of II Mechnikov "For a practical contribution of improving the health of the nation" and Paul Ehrlich of the European Commission for Academic awards "for outstanding achievements in the field of social and predictive medicine".
