	<u>BUY PEPTIDE COMPLEX 5</u>
Description	
Peptide Complex for bone tissue. Has natural peptides from cartilage.	
Purpose:	
<ul style="list-style-type: none">• Prevention of pre-mature ageing,• Broken bones,• Osteoporosis.	
Ingredients	
Distilled water, peptide complex A-4, glycerin, bio-antioxidant complex "Neovitin [®] ", phenoxyethanol with ethylhexylglycerin, propylene glycol, xanthan gum, PEG-40 hydrogenated castor oil, essential oil lemon, metilhlorzotiazolinon, methylisothiazolinone.	
Application method	
From 6-8 drops apply on the inner elbow part of the arm, perform massage movements until the substance is completely absorbed. Duration - 3 months. Up to 6 peptide complexes can be used at the same time.	
Main components	
<ul style="list-style-type: none">• Essential oil of lemon The antibacterial properties of essential oil of lemon manifested against tubercular bacilli, streptococci, staphylococci and meningococcus. Coumarin, a part of lemon oil, liquefied arterial blood, thus speeding up the circulation and promoting regeneration of small blood vessels. Essential oil of lemon - an indispensable way to cope with stress, improve mental	

and physical energy, as well as the prevention of psychosomatic diseases.

- Neovitin

Bio-antioxidant complex Neovitin comes from original technology of the cultivated strains of biotechnological method from the ginseng biomass. The new technology allows achieving the most complete extraction of the complex without losing its antioxidant activity. Bio-antioxidant complex Neovitin is anti-inflammatory and has immune stimulatory effects. Synergistic effect of the active components of the complex leads to the production of antioxidant enzymes in the body and interferon, which inhibit the reaction of peroxide oxidation (destruction) of lipid cell membranes of blood vessels whilst strengthening them, and thereby increasing the resistance of the body. Neovitin controls the formation and leads to the physiological formation of the main instigators of premature aging - free radicals, which are developed of throughout human organism life. It is also the main agent to neutralize free radicals. The complex is stable during its storage period and has a high, penetrating ability through the epidermis, dermis and mucous membrane. It has been proved: Neovitin has anti-inflammatory and regenerative effects, which result in its widest application in anti-aging skin and health care products and oral care. The unique properties of Neovitin have been confirmed by 11 patents and awarded gold medals RANS with the name of II Mechnikov "For a practical contribution of improving the health of the nation" and Paul Ehrlich of the European Commission for Academic awards "for outstanding achievements in the field of social and predictive medicine".
