	Vendor code: 61510
	BUY REVILAB SL 10
Description	
Peptide preparation for the female reproductive system. It contains synthesized peptides of epiphysis, vessel wall and urinary bladder.	
Purpose:	
<ul style="list-style-type: none">• normalization of neuroendocrine system functions• normalization of all cyclic transformations in organism• synchronization of body clock• normalization of reproductive system and increasing fertility• suspension for symptoms of menopause• oncological diseases therapy• arterial hypertension, atherosclerosis of vessels, angiopathy• urinary system disorders	
Ingredients	
Purified water, chamomile extract, xylitol, PEG-40 hydrogenated castor oil, orange essential oil, taxifolin, licorice extract, propolis extract, peppermint extract, sodium saccharin, peptide complex AA-1, peptide complex AA-13, peptide complex AA-7, potassium sorbate, sodium benzoate, clove essential oil, natural flavor "Menthol", eugenol, limonene.	
Main components	
<ul style="list-style-type: none">• Peptide of epiphysis (peptide complex AA-1) It has selective action on the gland cells, regulates the synthesis of melatonin and improves	

the function of the neuro-endocrine system.

- Peptide of urinary bladder (peptide complex AA-13)

It has biological activity which normalizes the urination, restores the metabolism in cells of urinary bladder wall, stimulate the muscle tone of detrusor and sphincter.

- Peptide of the vascular wall (peptide complex AA-7)

It regulates metabolic processes in the vascular wall. It can increase the elasticity of blood vessels and also can decrease the risk of damage to the vessel wall, bleeding and trombogenicity. Peptide complex AA-7 improves blood circulation of organs and tissues.

- Extract of licorice

Has a wide range of substances useful to the human body. 27 flavonoids in the licorice have a versatile effect on the body — both spasmolytic, wound healing, and anti-inflammatory.

- Extract of propolis

Suppresses activity and kills bacteria and viruses, slows the growth of some of them. Propolis struggles with oral diseases caused by various types of infections, including herpetic, fungal, bacterial nature.

- Peppermint extract

Contains essential oil, flavonoids, tannins and bitter — these are the main active ingredients of this plant. The most important component in essential oil is menthol (up to 60%), which has an easy local anesthetic effect.

- Chamomile extract

Has a strong bactericidal, anti-inflammatory and soothing effect, and also stimulates blood circulation. These properties made chamomile an indispensable tool in the treatment of various inflammatory processes.

- Essential oil of orange

Used to care for the oral cavity. Oil fights inflammation and bleeding gums, treats stomatitis, helps with periodontitis.

- Carnation essential oil

Used to care for the oral cavity. Oil fights inflammation and bleeding gums, treats stomatitis, helps with periodontitis.

Directions

Drip 5–10 drops on the oral mucosa. Use 2 times a day. Check presence of natural sediment. Shake before use. Receiving duration: one month.

Form release:

10ml
